ISA Transactions 32 (1993) 407–408
Elsevier

Author Index Volume 32

Alsup, F., Customer-focused communication: The key to total quality success 5– 8
Ayral, T.E. and S.J. Melville, Getting the best return on your process control investments 315–321

Bader, F.P., Utilizing multi-language international software standards for distributed process control 345–354
Beaverstock, M.C., It takes knowledge to apply neural networks for control 235–240
Bhullar, R.S., Strategies for implementing advanced process controls in a distributed control system (DCS) 147–157
Bhullar, R.S. and S. Sandler, Strategic field device integration—Your platform for future success 301–309
Bhullar, R., *see* Boyette, P. 75– 80
Boyette, P. and R. Bhullar, Managing control systems engineers in an engineering contractor environment 75– 80
Brannan, J.M., K.D. Brothers, M.K. Richardson and C.V. Simms, Partnering: The key to dynamic product documentation 23– 30
Brothers, K.D., *see* Brannan, J.M. 23– 30

Comello, E.A., Intrinsic safety revisited in the chemical process industries of the 90's 381–386
Cooper, R., The organisation of instrument evaluation by an accredited laboratory 283–289

Daniels, P., Customers improve the quality of training 15– 17
Deitz, D.L. and C.J. Herald, Computer systems validation and the software development process 65– 73
deSpautz, J., *see* Meserve, B. 215–224
Dror, Y., *see* Rodholm, P. 81– 85

Ehnthold, D.J., R.F. Tayor and E.V. Miseo, Emerging chemical sensor technologies for use in on-line applications 183–188

Fruehauf, P.S. and D.P. Mahoney, Distillation column control design using steady state models: Usefulness and limitations 157–175

Goble, W.M. and T.W. Tucker, Control system quality is free 209–213
Goujon-Durand, S., Vortex anemometer for measurement of both speed and direction of the wind 393–396
Grassi, V.G., Dynamic simulation as a tool to integrate process design and process control 323–332

Hanley, J.P., A strategic focus for process control 45– 49
Heller, R.P., *see* Sutanto, S. 297–300
Herald, C.J., *see* Deitz, D.L. 65– 73

Jekielek, J., Development of an international standard for documentation of software for process measurement and control systems and facilities 123–131
Jethra, R., Turbidity measurement 397–405
Johnson, Jr., W.H., *see* Maggioli, V.J. 387–391

Kincaid, J.E. and M.A. McGregor, Electrical noise considerations in facility/plant design 291–296

Lagana, T., Process computer audits 375–380

McAnany, D.E., Practical applications of artificial neural networks in chemical process development 333–337
McGregor, M.A., *see* Kincaid, J.E. 291–296
McKay, D.J., MRP II concepts for process control engineers 133–137
Magee, L., *see* Schneider, H. 355–366
Maggioli, V.J. and W.H. Johnson, Jr., Control system safety interlocks—Design and implementation 387–391
Mahoney, D.P., *see* Fruehauf, P.S. 157–175
Mahuli, S.K., R.R. Rhinehart and J.B. Riggs, Nonlinear model-based in-line control of wastewater pH: A laboratory study 241–245

Melville, S.J., *see* Ayral, T.E. 315–321
Meserve, B. and J. deSpautz, Use of electronic identification (eID) and signatures for integrated operations 215–224
Miseo, E.V., *see* Ehntholt, D.J. 183–188

Neidert, R.P. and W. Wilson, A new paradigm for industrial control system design 225–233

Ottino, C., User interface in the 1990's 95–121
Owler, A.M., International ("World Class") certification for hazardous location electrical equipment 199–205

Pruett, J.M., *see* Schneider, H. 355–366

Rhinehart, R.R., *see* Mahuli, S.K. 241–245
Richardson, M.K., *see* Brannan, J.M. 23– 30
Riggs, J.B., *see* Mahuli, S.K. 241–245
Rodholm, P. and Y. Dror, The concept of accredited certification (registration) of quality systems to ISO 9000 in the European Community 81– 85

Sanders, R.E., The art of effective trainer questioning 19– 21
Sandler, S., *see* Bhullar, R.S. 301–309
Schneider, H., J.M. Pruett and L. Magee, Reduction of variation in the gasoline blending process—A case study 355–366
Scurlock, R.G., On-line instrumentation of cryogenic systems and plant to an accuracy of 0.1% using cold electronics 189–192
Shaw, J.A., DCS-based alarms: Integrating traditional functions into modern technology 177–181
Shaw, J.A., Effect of process dynamics on traditional controller tuning methods 367–374
Simms, C.V., *see* Brannan, J.M. 23– 30
Sutanto, S. and R.P. Heller, Utility Communications Architecture review 297–300

Tayor, R.F., *see* Ehntholt, D.J. 183–188
Tucker, T.W., *see* Goble, W.M. 209–213

Uhrig, R.E., Use of neural networks in nuclear power plants 139–145
